Work Experience – 5+ Years

PROFESSIONAL SUMMARY

Platform Engineer with **5 years of experience** in AWS cloud infrastructure, platform engineering, DevOps and cloud security. Experienced in designing and automating secure, scalable AWS platforms using **AWS CDK, Terraform, CloudFormation and CI/CD**. Strong experience across **AWS Identity and Access Management, Microsoft Active Directory, AWS Organizations, cross-account access, networking, infrastructure automation and deployment governance**. Hands-on experience in **AWS ECS, EC2, Lambda, VPC, CloudWatch, S3 and AWS Glue**, with a focus on security, reliability and operational efficiency. Experienced in cloud migration, platform modernization and cost optimization, including delivering **30-40% cost reduction across S3 and CloudWatch Logs**. Collaborate with senior technical stakeholders and Chief Engineers on platform architecture, solution design and enterprise AWS initiatives.

CERTIFICATION

AWS Certified Solutions Architect- Associate	2024
AWS Certified Developer- Associate	2026
AWS Certified Cloud Practitioner	2023

EDUCATION

B. Tech	Bhilai Institute of Technology, Durg	2020
HSC	Oriental Public School, Ambikapur	2015

PROFESSIONAL EXPERIENCE

CommonWealth Bank of Australia., Platform Engineer

April'25 – Till Date

Project Experience/ Responsibilities

1. AWS Deployment Security Validation

- Designed and developed an **AWS CloudFormation Hook with a Lambda backend** to evaluate AWS resources against defined security and governance controls.
- Implemented deployment-time validation to determine whether an AWS resource complies with required controls before allowing the deployment to proceed.
- Developed security tooling to improve consistency of security validation across AWS deployments.

2. EC2 Bootstrap Automation

- Developed EC2 bootstrapping automation to automatically **domain join VMs to Microsoft Active Directory**.
- Automated configuration of **CloudWatch, AWS Systems Manager (SSM), and instance profiles** when required configurations are not provided during provisioning.
- Standardized post-provisioning configuration to ensure EC2 workloads have the required **monitoring, logging, auditing and management** capabilities.

3. AWS Landing Zone Lifecycle

- Contributed to the **redesign of the AWS Landing Zone lifecycle**, covering account provisioning, configuration, governance, security controls and deployment processes.
- Improved automation and standardization of AWS platform lifecycle operations across cloud environments.

4. AWS Cost Optimization

- Implemented organization-wide cost optimization initiatives across AWS services.
- Achieved approximately **30-40% cost reduction across S3 and CloudWatch Logs** through optimization and usage improvements.

Other Responsibilities

- Engineer and support the **AWS cloud platform**, with focus on Identity, Security, Governance and platform automation.
- Manage and support **Microsoft Active Directory integration** for AWS cloud workloads.
- Work on **IAM, cross-account access and AWS Organizations** to support secure access patterns across AWS environments.
- Support AWS **networking and connectivity** requirements across platform workloads.
- Work with services including **EC2, ECS, VPC, Lambda, DynamoDB, Route 53, S3 and CloudWatch** as part of platform engineering and operational activities.
- Develop and maintain infrastructure and deployment automation using **Terraform Enterprise, CloudFormation, AWS CodeBuild and GitHub Actions**.

	• Work with security and observability platforms including Wiz and Observe, and automation workflows involving Temporal. • Troubleshoot and resolve identity, infrastructure, networking and deployment-related issues across AWS environments. • Collaborate closely with Chief Engineers and senior technical stakeholders on technical design and architecture decisions. • Participate in platform-level design discussions, implementation planning and continuous improvement initiatives. • Contribute to strengthening security, governance, reliability and operational standards across the AWS platform.
--	---

Persistent Systems Ltd., Lead Software Engineer		Nov'22 – April'25
Project Experience/ Responsibilities	1. Application Migration from On-Premises to AWS ECS • Led migration of a PHP Laravel application from on-premises infrastructure to AWS ECS Fargate. • Migrated approximately 1 TB of MySQL data to Amazon Aurora MySQL. • Containerized multiple interdependent application components using Docker and deployed them through Amazon ECR and ECS Fargate. • Implemented AWS CDK using TypeScript for infrastructure provisioning and deployment automation. • Configured AWS services including ALB, VPC and Secrets Manager to support application deployment and secure configuration. • Improved application scalability, deployment consistency and reliability through AWS cloud-native architecture. 2. CI/CD and AWS Infrastructure Automation • Designed and implemented CI/CD pipelines using AWS CDK, CodePipeline, CodeBuild and CodeDeploy. • Automated infrastructure provisioning and application deployment using Infrastructure as Code. • Implemented JAR build and validation processes using Maven. • Automated deployment and validation workflows for data-processing workloads using AWS Glue and Glue Studio. • Designed and optimized VPC and networking for AWS Glue workloads while following network security best practices. 3. Data Platform and Database Infrastructure • Worked on bulk data loading and database infrastructure on AWS. • Developed and maintained custom AMIs for database workloads running on EC2. • Worked on database deployment and infrastructure automation across cloud environments. 4. Multi-Cloud SaaS Infrastructure • Worked on deployment of SaaS database infrastructure across AWS, GCP and Azure. • Used AWS CDK, Terraform and Azure DevOps to automate infrastructure and deployment workflows across cloud environments.	
Other Responsibilities	• Led and coordinated technical activities within the team, including planning, implementation and delivery of cloud and DevOps initiatives. • Designed and implemented AWS infrastructure and deployment solutions with focus on automation, scalability and reliability. • Applied AWS security best practices using IAM roles and policies, AWS Secrets Manager and encryption. • Worked on infrastructure provisioning, deployment automation and troubleshooting across AWS environments. • Collaborated with development and technical teams to resolve deployment, infrastructure and integration issues. • Participated in solution design and technical discussions for AWS cloud migration and infrastructure automation. • Continuously improved CI/CD processes, infrastructure automation and cloud deployment practices. • Supported delivery of secure and reliable cloud solutions in collaboration with client and internal stakeholders.	
Initiatives & Recognition	• Awarded as TOP TALENT for exceptional performance in FY24 at Persistent Systems. • Appreciation from Client for on time delivery and designing secured CI/CD and DB architecture.	

Tata Consultancy Services Ltd., Assistant Systems Engineer		Jan'21 – Nov'2
Responsibilities	1. Production Support and Application Operations • Provided L2 production support for a billing application built using Java, Spring Boot, Oracle and AWS. • Troubleshoot application issues and supported production incidents to maintain application availability. • Handled production deployment and integration issues involving ETL processes and APIs. 2. AWS Application Deployment • Managed application deployments on AWS EC2 using Jenkins-based deployment processes. • Worked with Application Load Balancer (ALB) for application traffic distribution. • Supported scaling of application servers based on workload requirements. • Worked with Amazon RDS as part of the application infrastructure. 3. Deployment and Infrastructure Support • Supported deployment, configuration and scaling activities across application environments. • Assisted with automation of recurring deployment and operational activities.	
Other Responsibilities	• Provided day-to-day L2 application and infrastructure support for production workloads. • Investigated and resolved application, deployment and integration issues within defined support processes. • Worked with development and operations teams to troubleshoot ETL, API and deployment-related issues. • Supported AWS infrastructure configuration, application scaling and production deployments. • Managed user accounts and access required for application operations. • Monitored application and infrastructure issues and coordinated resolution with relevant technical teams. • Participated in production deployment activities and post-deployment troubleshooting. • Contributed to improving deployment automation and operational processes. • Worked on Jenkins, AWS EC2, ALB and RDS as part of application support and deployment activities.	
Initiatives & Recognition	• Awarded on SPOT Award for upholding organization values and professional excellence in FY22 at TCS	
COURSEWORK		
Academic Projects	• CLI Based Quiz Application with Multi-User Access and Result Analytics • HTML Link Status Checker with Console Output and Chart Visualization • Health Monitoring System using ESP32 Arduino & SIM800L with SMS alerts	
LEADERSHIP EXPERIENCE		
Positions of Responsibility	• Member, Core Organizing Committee, OJAS – College TechFest • Head Boy of School	2018,2019 2014,2015
SKILLS		
DevOps	• Cloud & Platform Engineering AWS, Azure, AWS Organizations, EC2, ECS, VPC, IAM, CloudFormation, Lambda, S3, CloudWatch, SSM, Route 53, DynamoDB, Aurora MySQL • Infrastructure as Code AWS CDK, Terraform, Terraform Enterprise (TFE), CloudFormation • CI/CD & Automation GitHub Actions, AWS CodeBuild, CodePipeline, CodeDeploy, Jenkins, GitLab CI • Security & Identity IAM, Microsoft Active Directory, Cross-Account Access, Security Governance, Wiz • Containers & Application Platforms Docker, Kubernetes, ECS, ECR • Programming & Scripting Python, Shell Scripting, Bash • Version Control GitHub, GitLab, CodeCommit
